Cross Border Activities Updates (KENYA)

- **Community based surveillance:** 1 suspected case of AFP was detected and reported by the community mobilizers during the week in Dadaab, Garissa county.

- **Routine Immunization Outreaches:** The project supported 6 immunization outreach services during the week.

- **Social Mobilization:** The CVs conducted weekly routine sensitization on immunization & surveillance through house to house strategy while observing COVID-19 protocols. 4,264 households visited, reaching 3,997 (1,573 males & 2,424 females).

- **Defaulter tracing:** During the week, border health facilities in Kenya reported 243 children < 1-year defaulters and traced 170 (70%).

Cross Border Activities Updates (SOMALIA)

- **Community based surveillance:** No suspected AFP cases was detected by the community mobilizer during the week.

- **Routine Immunization Outreaches:** 1 routine immunization outreach sessions were supported during the week in the CGPP supported regions.

- **Social Mobilization:** The CVs conducted weekly routine sensitization on immunization & surveillance through house to house strategy while observing COVID-19 protocols. 1,858 households visited, reaching 669 (277 males & 392 females)

- **Defaulter tracing:** During the week, border health facilities in Kenya reported 17 children < 1-year defaulters and traced 10 (59%).

Global Health Security—Priority Zoonotic Diseases Updates: (KENYA):

**SUSPECTED CAMEL DISEASE IN MANDERA COUNTY**

- A meat inspector at Elwak slaughter house in Mandera county, noted 1 of the 4 camels brought for slaughter was sick. This was during his routine inspection before animals were slaughtered on 17th September 2021.

- The inspector notified the project team, even though the sick camel had already passed on before being slaughtered with blood oozing from its orifices suggestive of either Anthrax, Rift Valley Fever or Hemorrhagic Septicemia diseases.

- With the camel’s history, it was noted that the camels had migrated from Ethiopia where there was reported of unknown camel disease outbreak that mimics anthrax during the month of May.

- The project supported the county team for sample collection, in depth history of the animals situation in the area and to intensify community sensitization.

- The authority immediately isolated the three remaining camels, disinfected the slaughter house, immediate ban of selling camel products in the market and disposing the caucus through burning.

- 17 samples were collected for further investigation which is done at Nairobi
