Program Functionality Assessment
A Toolkit for Improving CHC and HFMC Programs
Community Health Committees (CHCs) and Health Facility Management Committees (HFMCs):

Program Functionality Assessment:

A Toolkit for Improving CHC and HFMC Programs

January 2017
Acknowledgements

This document was developed by Michele Gaudrault of World Vision International, and Karen LeBan, Lauren Crigler and Paul Freeman, independent consultants and members of the CORE Group.

The authors would like to thank participants of the CORE Group Global Health Practitioners Fall Conference 2015 for the valuable reactions and feedback provided during and after that event. Particular thanks go to Minal Rahimtoola and Camille Collins Lovell of Pathfinder International for their comments on earlier drafts of this product and suggestions for improvements. Appreciation is also extended to René Loewenson of Equinet (Regional Network for Equity in Health in East and Southern Africa) for sharing relevant research and discussion papers. Finally, thanks to the Siaya Sub-County Health Management Team, Kenya, and Lilian Chebon of World Vision Kenya for their support during field testing of this tool.

Section 1: Introduction

A. Background

The development of this tool originated from the CORE Group Fall 2014 Global Health Practitioners Conference, in a session focusing on community support for Community Health Workers (CHWs). In 1989, WHO recommended that CHW programs have the support of a group composed of members of the community with active links to the health sector. Such groups exist in many countries, known by various names such as village health committees, community health committees and the like. In addition to providing support to CHWs, these groups may perform other functions to include assessing and tracking local health status and issues, mobilizing communities for action to address identified issues, and advocating for improved health services. While the initial focus of the CORE Group session was to understand the support that such groups can provide to CHWs, attention turned to consider the strength of the groups themselves, and the support that they, too, require in order to perform successfully.

While many Ministry of Health (MoH) community health strategies around the world include community health committees, the reality on the ground shows that these groups are often weak and poorly supported. Literature and field experience suggest that before the strength of individual groups can be considered, there are fundamental programmatic, structural and policy elements that must be in place in order for the community health committee programs to function effectively. It was felt that ministries and partners could benefit from a tool that listed and described these recommended programming components, to use for assessment and programming improvements.

This tool has been developed to help Ministries of Health and supporting organizations to assess community and health facility committee program functionality against 14 elements deemed essential for program success; to review the scope of roles and responsibilities intended for the groups; to identify existing program strengths, and to address those elements assessed as weak. Note that the tool is not intended to assess individual community or health facility groups but rather to assess the functionality of the program as a whole, in line with the understanding that the prerequisites must be in place first, before the strength of the groups themselves can be considered.

Community Health Committees (CHCs) and Health Facility Management Committees (HFMCs)

There is extensive literature advocating for, and in some cases providing evidence to support, the importance of community participation as a means of improving community health outcomes. Ministries of Health and governments have acknowledged this, developing community health strategies that include varieties of community participation, to include processes of community mobilization, the work of CHWs, and the functions of community health groups.

This tool focuses specifically on two types of representative health groups; the Community Health Committee (CHC) and the Health Facility Management Committee (HFMC).

CHCs are typically embedded and located in the community and carry out their work there, are comprised of membership almost exclusively from within the community, and may or may not have a strong formal link with the health facility and the MoH at large. Their roles and responsibilities relate to identifying and addressing health issues within the community, and supporting community health workers and/or other volunteer health cadres. They may also be involved in actions of a social accountability nature; raising issues regarding health service performance, although the intention (in community health strategies) is that they
remain supported by MoH in any case; thereby distinguishing them from those groups that may occupy a fully autonomous space and whose primary function is to hold duty bearers to account.

The Bamako Initiative, sponsored by UNICEF and WHO and adopted by African ministers of health in 1987, saw the emergence of village committees involved in health-facility management, with particular success in West Africa. HFMCs now form part of community health strategies in many countries around the world. HFMCs are by definition attached to local health facilities and formally linked with MoH, usually include both community representatives and facility staff as members, and typically hold meetings and carry out their work at the facility, with a potentially lesser presence in the community as compared to CHCs. Roles and responsibilities relate more to facility management concerns, and the channeling of community health concerns to facility staff, than to work in the community as such.

Individual countries may have one or both types of group. This tool may be used with either CHCs or HFMCs. Two versions of the ‘Roles Checklist’ and ‘Assessment and Improvement Matrix’ are included; one for each type of group. In many ways, the programmatic and structural elements required for success are the same for CHCs and HFMCs, but there are enough differences between them to warrant the two versions.

**Users**

In most cases, responsibility for mandating, designing, managing and supporting a CHC and/or HFMC program lies – or should lie – with the Ministry of Health. As such, this tool is primarily aimed at supporting ministries to assess and improve these programs. Nonetheless, it is recognized that it is frequently the case that ministries work in partnership with non-governmental organizations (NGOs) or other agencies to implement and manage the CHC/HFMC programs. The tool, as such, is designed to be used by any implementing organization. Ideally, the exercise will be carried out by the supporting organization together with the Ministry of Health, and ultimately taken on entirely by MoH.

**Objectives of the Functionality Assessment Process**

- Assess functionality and guide improvement in programs working with CHCs and/or HFMCs
- Develop action planning and best practices to assist in strengthening CHCs and/or HFMCs
- Identify the location of functional CHC and/or HFMC programs and geographic gaps in coverage
B. Program Functionality Assessment Process

The functionality assessment exercise may be carried out at any time. In most cases, CHC and HFMC programs are in existence and ongoing; rarely will it be the case that the functionality assessment will be carried out at start-up of a new CHC/HFMC program (although it is recommended that it be carried out at the start of any implementing partner’s support and involvement with a program). The functionality assessment will be used by ministries of health and partner agencies to assess the current state of CHC and HFMC programmatic and structural design and support elements at any point in time, with a view to improving the necessary elements as needed.

The tool is meant as a guide to aid progress rather than a rigid prescription and so covers key concepts relevant at this level of programmatic design and improvement, while recognizing that some adaptation to local contexts may be needed1.

**Facilitation:** Although participatory in nature, the process should be led by an experienced facilitator. The facilitator’s role is to guide the planning, implementation, and follow up of the assessment. He or she runs the workshop and ensures active participation, consensus, completion of tools and responsive action plans.

**Participants:** The assessment should be carried out during a workshop with multiple stakeholders knowledgeable about how the program is managed or supported and the geographic areas in which it functions. Between 15 and 25 participants is recommended, and should include MoH staff at appropriate levels, field managers, sub-national managers, CHC and/or HFMC members and their supervisors. The process promotes the involvement of CHC and/or HFMC members, as their experience and voice adds to a fair assessment.

**Approach:** The process is based on a guided self-assessment that allows a diverse group of participants to score their own programs against a checklist of roles and responsibilities, and against a matrix of 14 programmatic components. Following the review, the participants use the results to develop action plans to address areas assessed as weak.

The approach encourages rich discussions on actual, versus theoretical, impressions of CHC and/or HFMC programs. It allows host governments to quickly and efficiently map and assess programs using a rating scale based on literature support and good practice.

**Limitations:** The approach does not evaluate the strength of individual CHCs or HFMCs.

---

C. Structure of the Functionality Assessment

There are two tools for assessing the functionality of the CHC and/or HFMC program:

1. Checklist of Roles and Responsibilities (CHC and HFMC versions)

The checklist contains nine categories of roles for CHCs and HFMCs. Each role category contains a list of possible responsibilities, distinguishing between those responsibilities that all groups should do at minimum in order for the program to be considered functional (labeled ‘standard’ in the checklist), and those that are considered context-specific or ‘optional’ (labeled ‘per context’ in the checklist).

<table>
<thead>
<tr>
<th>Roles</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Link community and health service providers</td>
</tr>
<tr>
<td>2. Network with health partners and stakeholders</td>
</tr>
<tr>
<td>3. Assess and monitor community health status</td>
</tr>
<tr>
<td>4. Mobilize community outreach and action</td>
</tr>
<tr>
<td>5. Address socio-cultural norms</td>
</tr>
<tr>
<td>6. Provide leadership and governance oversight of health services</td>
</tr>
<tr>
<td>7. Mobilize resources for health activities</td>
</tr>
<tr>
<td>8. Provide support to CHW program</td>
</tr>
<tr>
<td>9. Provide oversight and support to health facility</td>
</tr>
</tbody>
</table>

2. Assessment and Improvement Matrix (CHC and HFMC versions)

The assessment and improvement matrix is divided into 14 components, each with descriptions of characteristics of functionality in the scoring ranges of 0-3. Figure 1 categorizes the 14 components into four main topical areas, providing an overall Program Functionality Framework.

Figure 1: CHC/HFMC Program Functionality Framework
Programmatic Elements

The following 14 programmatic elements are considered essential pre-requisites for functional CHC/HFMC programs.

Section II: CHC/HFMC Program Functionality Steps and Instructions

Step 1: Pre-Workshop: Collect documents and adapt tools to program context

Collect program documents

Refer to the Document Review Guide and Checklist for CHC/HFMC Programs in Appendix A. Collect all documentation describing the CHC and/or HFMC programs and review the documents to understand how the program(s) function. If possible, speak to program managers and key MoH staff for deeper descriptive understanding. Note in the comments section of the checklist any key programming features that support or do not support good practice. Documents should be brought to the workshop as background and evidence during participant discussions.

Align CHC/HFMC Roles and Responsibilities Checklist(s)

Refer to the appropriate checklist(s) in Appendix B. If the assessment will be dealing with CHC programming, use the first checklist; with HFMC programming the second checklist; with both types of committees both checklists.

The checklists contain eight broad categories of roles for each type of group. Within each role category is a list of responsibilities, differentiated between core and specific-to-context. Prior to the workshop, and based on the programming documentation collected and discussions with MoH and other key implementers, determine which categories of roles form part of the committees’ work in your country. Remove from the checklist(s) any role category that the committee(s) are not meant to perform, and print final copies of the checklist(s). The final checklist(s) should contain only those role categories that are within the purview of the committee(s) in the country, per MoH guidelines. For those role categories that remain, do not delete any of the responsibilities. The analysis of whether or not the committees carry out the responsibilities listed in the role categories will take place during the workshop.

Contextualize the CHC/HFMC Assessment and Improvement Matrix/Matrices

Refer to Appendix C for the CHC and HFMC Assessment and Improvement Matrices. Use one or both, depending on the type(s) of committee(s) you are assessing. Share the matrix/matrices with the program managers and key stakeholders. The matrices are based on good practice, but discussing them ahead of time will raise awareness about their contents and usefulness for assessing and strengthening CHC/HFMC programs. Determine if any changes are needed for the specific context. For example, you should change the titles if the committees in the country where you are carrying out the assessment go by different names; e.g. Village Health Committee, Health Center Advisory Board, etc.

Plan the Assessment Workshop

- Identify and invite participants, to include program staff, MoH representatives at various levels, CHC and/or HFMC members, CHC and/or HFMC supervisors, and representatives of CHWs or other volunteer cadres associated with the CHC and/or HFMC, if any
- Organize the field visit to take place either before or after the workshop; to carry out FGDs with between 2-3 committees of each type being assessed
- Arrange all logistics for a one or two day assessment workshop; e.g. venue, refreshments, transport, photocopies, etc.
Step 2: Assessment and Improvement Workshop

Introduce the Process

You may wish to develop a brief presentation to introduce the workshop goal and objectives, and provide an overview of the Roles and Responsibilities Checklist and the Assessment and Improvement Matrix.

Explain that the CHC/HFMC program functionality assessment process is meant to ensure functionality of CHC and/or HFMC programs by rating the program(s) against 14 good practice elements, and by determining whether the CHCs and/or HFMCs are carrying out a full range of recommended responsibilities based on their roles according to program and national guidelines. The assessment and action planning process will help guide MoH and partners to improve on areas identified as weak.

The process is not meant to measure the performance or strength of individual CHCs and/or HFMCs.

You may also wish to lead a short session to discuss the challenges of supporting CHCs and/or HFMCs, as this would lead nicely into analyzing the programmatic components that may or may not be in place to support the committees. You could divide participants into small groups for brainstorming, followed by report back and discussion in plenary, for example.

Carry out Analysis of CHC/HFMC Roles and Responsibilities

Distribute copies of the relevant Roles and Responsibilities Checklist(s), per the type of group(s) you are assessing; e.g. CHC, HFMC or both. These should be the aligned, final copies of the checklist(s) that include only the role categories that the committees are meant to be carrying out per the document review and discussions regarding national guidelines that you carried out prior to the workshop. Have on hand the documents you collected prior to the workshop; e.g. national guidelines describing the CHC and/or HFMC programs and policies, etc.

Divide the participants into small groups and assign each group one or more role categories. (You may have some groups reflecting on CHCs and others on HFMCs, if you are assessing both types of committees.) Using their own knowledge and experience with CHCs and/or HFMCs, and referring to the background documents, they should determine which of the responsibilities listed in the role categories are meant to be carried out by the committees, and complete the checklist accordingly.

Return to plenary and consolidate the results on flip charts. Zero in on any responsibilities indicated as ‘core’ that the committees are not carrying out. Good practice recommends that for CHC/HFMC programs to be considered functional, the committees should ideally be carrying out a minimum range of core responsibilities – anything less than the core range is less than comprehensive and therefore less than functional. Lead a discussion to determine if the participants agree that these core responsibilities should in fact be considered ‘minimum standards’, and if there is a consensus for adding missing responsibilities into the committees’ mandates.

If the participants (including the Ministry of Health) agree that there are gaps in the committees’ range of responsibilities, the MoH may consider whether they will update guidelines to include new areas. Explain to

---

participants that they will fill out an action plan later in the workshop, and the MoH may choose to include actions related to the guidelines at that time.

**Review the Validation Questionnaire, prepare for field visit**

Ideally, the workshop will be organized such that the field visit to meet with CHCs and/or HFMCs takes place prior to scoring the Assessment and Improvement Matrix/Matrices. By gathering information and views directly from CHC/HFMC members the scoring will be a more accurate reflection of the status of programming, than if the scoring were carried out by relying only on the information and views of the workshop participants.

Distribute copies of **Appendix D**: the CHC/HFMC Validation Questionnaire. Note that the same questionnaire can be used with either type of committee. Explain that the participants will use the questionnaire as a guide for leading Focus Group Discussions (FGDs) with members of CHCs and/or HFMCs. The questions aim to provide information around the 14 elements of the Assessment and Improvement Matrices.

If you feel that the participants require explanation and practice carrying out FGDs you may build that into the workshop. You will need to locate materials that will prepare you to lead a session on how to carry out effective FGDs, and what to observe for when participants practice/simulate an FGD.

**Carry out Field Visit: FGDs with CHC and/or HFMC members**

You should aim to carry out a minimum of two FGDs with each type of committee you are assessing. (i.e. two FGDs with CHCs, and/or two with HFMCs). The number of FGDs should be increased if the types of groups or the characteristics of the settings and communities vary widely within the country, to ensure that representative information is gathered from these various contexts. The number of committee members participating in an FGD should not exceed 12, to enable good discussion by all. You will probably want to split the workshop participants into groups; with each group carrying out perhaps two FGDs in one day of field work. Ensure that all logistics are in place.

Following the field visit (either on the same day or the morning of the next day), the workshop participants will come together and debrief; sharing the information they gathered from their respective FGDs.

**Score the Assessment and Improvement Matrix/Matrices**

Distribute copies of the relevant Assessment and Improvement Matrix/Matrices, per the type of group you are assessing; e.g. CHC, HFMC or both. Distribute copies of **Appendix E**, the Score and Score Rationale Documentation Worksheet.

Carry out the scoring process for the first element of the Assessment and Improvement Matrix (Strategic Description and Clarity of CHC and/or HFMC Programming) in plenary. Read the description in the first column. Have the participants silently read the descriptions for each level of functionality 0-3 and decide how they would score their program, based on how the program matches the criteria under each level of functionality. Note that there are no ‘half scores’ such as 2.5. They must score a full 0, 1, 2, or 3, and the program must meet all the criteria to fit a particular score. Give the participants time to make their assessments and then ask how many scored 0, 1, 2 or 3; write the numbers on a flip chart. Ask those whose scores differ from the majority to justify their responses. Encourage discussion until consensus is reached on a final score. Ask if there are any questions, clarify them and provide feedback.
Explain that they will use the *Score and Score Rationale Documentation Worksheet* to document and justify their scores. Explain that the remaining section of the matrix/matrices will be done in small groups.

Divide the participants into groups and assign matrix elements to each group. You may have some groups assessing CHCs and some assessing HFMCs if you are working with both types of committees. Ensure that the groups are evenly balanced in terms of the types of stakeholders represented (e.g. MoH staff, implementing partner staff, CHC and/or HFMC members, etc.)

The groups should discuss and reach consensus on the score for each element assigned to them. They should refer to the program documents provided by you, the information from the FGDs and their own knowledge and experience with the committees to decide on the scores. They will record their scores and justification on the worksheet. They should also begin to think of the types of actions that could be recommended to improve the scores as necessary, and write their ideas in the corresponding column.

Once all groups have finished, return to plenary. Each small group will present their results, which should be followed by plenary discussion to reach consensus on a final score. Allow ample time for discussion at this stage – this is the heart of the functionality assessment process and deep discussion around the CHC and/or HFMC programming should take place in order to grapple with the issues that are problematic, the challenges that the programs are facing, and to think through the best ways of working through these and bringing programming up to high levels of functionality. Record the final scores on a flip chart.

*Alternative:* As an alternative, the FGDs with the CHC and/or HFMC members may be carried out after the scoring process. In this scenario, the participants will score during the workshop based on their knowledge and experience with CHCs/HFMCs, and then use the FGDs as opportunities to validate and perhaps adjust the scores taking into account the perspectives of the committee members. The advantage of this alternative is that it provides an opportunity to clarify with the committees any issues that may have surfaced during the workshop discussions. The FGD questionnaire should be reviewed before the field exercise to identify the questions that refer to any such issues, so that the FGDs can focus in on those questions specifically. Nonetheless, the participants should still plan to ask all the questions in the FGDs. This will ensure that the scoring is not based on assumptions but, rather, on the actual views of all involved. The CHC/HFMC members may also have input into actions to be included in the action plan, below.

**Create an Action Plan**

Distribute copies of *Appendix F: Action Plan Framework*, or have the participants write on flip charts. You may break the participants into small groups again, or work in plenary. An action plan should be developed in order to: (1) incorporate new responsibilities into the committee(s)’ scope of work, if required per the *Roles and Responsibilities Checklist* assessment, and (2) improve any programmatic elements scoring less than 3. Ideally the workshop participants will include those decision-makers who can authorize changes and authorize the actions needing to be taken. If decision-makers are not present then the actions can be presented as recommendations, and followed up with decision-makers at a later stage.

**Next Steps and Follow Up**

Ensure that steps are agreed for bringing the action plan forward prior to closing the workshop. Hold a follow-up meeting at a later date with MoH, program managers and some of the participants from the workshop, to review the action plan and to discuss how to complete it. Share the final action plan with all stakeholders for their knowledge and assistance. Discuss how the plan will be monitored. If more than one location or organization has been involved, consider a meeting of representatives from all sites to periodically share effective actions and discuss challenges and achievements.
Appendices

Appendix A: Document Review Guide and Checklist for CHC/HFMC Programs

**Instructions**: This document should be completed in advance of the assessment workshop by the facilitator as part of pre-workshop preparation. If possible, conduct interviews with program managers and supervisors to review documentation and understand how the program functions and how the documentation might inform the workshop assessment and scoring process. Note in the Comments section any key elements that support or do not support good practice. Documents should be brought to the workshop as supporting evidence during participant discussions.

### Appendix C: CHC and HFMC Assessment and Improvement Matrices

#### I. Community Health Committee (CHC): Assessment and Improvement Matrix

<table>
<thead>
<tr>
<th>Component Definition</th>
<th>0 Non-functional</th>
<th>1 Minimal</th>
<th>2 Functional</th>
<th>3 Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHCs are included in MoH community health strategy and their strategic intent is clearly described</td>
<td><strong>MOH is not involved</strong> in establishing or supporting CHCs. The CHCs may have been formed through NGO or other organizations, with no link to MoH</td>
<td>MoH is the recognized institutional body convening the CHCs, but the roles and functions of these groups are <strong>not formalized</strong> in policies or strategies for community health</td>
<td>CHCs form part of MoH policies, <strong>strategies</strong> and/or action plans for community health, and the strategic intent, roles and functions of these groups is <strong>clearly described</strong> in written documentation. The policy/strategy is reviewed on a regular basis and updated as needed</td>
<td>CHCs form part of MoH policies, <strong>strategies</strong> and action plans for community health and the strategic intent, roles and functions of these groups is <strong>clearly described</strong> in written documentation. The policy/strategy is reviewed on a regular basis and updated as needed</td>
</tr>
</tbody>
</table>

If strategy calls for both HFMCs and CHCs, the strategic intent and functions of these two groups are clearly described and differentiated.

Where HFMCs are operational alongside CHCs, the MoH is **not involved** in establishing or supporting the CHCs.

Where HFMCs are operational alongside CHCs, MoH is the recognized institutional body convening these groups, but the **distinctions between the two types of groups is not described** in policies or strategies for community health.

Where HFMCs are operational alongside CHCs, the existence of these two groups forms part of MoH policies or strategies for community health, but the distinction between the two groups is poorly understood in practice.

Where HFMCs are operational alongside CHCs, the existence of these two groups forms part of MoH policies or strategies for community health, and the strategic intent and functions of these two groups are **clearly described and differentiated**.
## 2. CHC Formation

## Appendix D: CHC/HFMC Validation Questionnaire

**Instructions:** Use this document either before or after the assessment workshop to verify the scoring established by workshop participants. Try to visit 2-3 committees that did not participate in the workshop (or 4-6 if you are assessing both CHCs and HFMCs; 2-3 of each type of group) and hold focus group discussions with committee members, using the questions in this questionnaire as a guide. The number of committee members participating in a FGD should not exceed 12 to enable good discussion by all. Following the FGDs, compare responses with the workshop scores and the action plan to determine if any changes are needed. If the FGDs are conducted prior to the assessment, use the information as a guide during the discussion. If the FGDs take place after the assessment, discuss the changes with those who participated in the assessment.
