Chevron Program to Combat Malaria

Dr. Ana Ruth Louis
Introduction

- One of the policies of Chevron and its partners is to create a favorable business climate among the communities where we operate. For this reason, we are a privileged social partner of the Angolan Government in the health sector.

- The engagement of Chevron Corporation and its affiliates in combating malaria began in 1994 in the province of Cabinda.

- Other areas of intervention in the health sector are:
  - Safe blood transfusion (since 1992, in Cabinda)
  - Combating Tuberculosis (since 2001, in Cabinda)
  - Combating HIV (since 2003, in Cabinda)
  - Reproductive health (since 2004, in Cabinda)
  - Construction and rehabilitation of sanitation facilities (since 1998, in Cabinda, Luanda and Huila)
Community Program to Combat Malaria

General objective

Contribute to reducing the impact of malaria in the Republic of Angola and particularly in the province of Cabinda

Specific objectives

1- Provision of mosquito nets impregnated with insecticides and awareness material in Cabinda and other provinces

2- Provision of additional microscopes and consumables for the diagnosis in the province of Cabinda

3- Contribute to the vector control through the provision of spraying equipment and related chemicals in Cabinda
Key actions carried out in 1994-2009 in Cabinda, and in other provinces

- A laboratory equipped for the diagnosis of malaria to provincial public health Directorate in Cabinda
- 154,000 Insecticide Treaties in Cabinda, Luanda, Bengo and Cunene
- Chemicals for Spray intra and extra household in Cabinda
- 21 microscopes and other means for the diagnosis in Cabinda
- 16 dryers slides in Cabinda
- 2 and 3 Centrifugal agitators in Cabinda
- 4 Extra home sprayers in Cabinda
- Study quimioreexistência to chloroquine and fansidar to 150 children in Cabinda
- Full uniform for 30 staff who worked on the application of chemicals in mosquito nets and TIFAS operators.
- Recycling of 40 Cabinda lab technicians in clinics of CABGOC
- Donation of $ 5,000,000 to the Global Fund for programs to combat malaria
- Community project for combating major diseases in the province of Malange, and construction of a centre of attention for the health of adolescents and young people in Huambo Province
Distribution of mosquito nets to the communities of Iabe, in Cabinda, in 2008
Distribution of mosquito nets to communities in the province of Bengo, in 2009
Donation of mosquito nets to flood victims in Cunene province in 2009
Despite the investment already made by Chevron Corporation and the Angolan Government, the current trend requires us to continue to invest in sanitation and combat the vector.
Perspectives for the last 4 months of 2009

Provision of the following diagnostic methods to tackle the difficulties experienced in 8 health centers in the outskirts of Cabinda and 10 health posts along the coast of the same province:

- 12 Microscopes and 60,000 glass laminas.
- 30 Packs of cedar oil 1x100 ml
- 50 Cotton 1x500 GRS packets
- 50,000 Lancets
- 25,000 rapid tests

Regarding prevention shall be the provision of:
- 40,000 mosquito nets to Cabinda and other provinces

As regards the fight against the vector will be made to the provision of:

- Co-sponsored workshop on Entomology for approximately 45 health professionals from all the provinces to take place from 28 September to 17 October 2009 in Bengo Province. CAMA will carry out the training session
Program to Combat Malaria in the Chevron / CABGOC
Program to Combat Malaria in the Chevron / CABGOC

In November 2005 it launched the A-B-C-D program of Malaria

Objectives:

- Improve awareness about the risks of malaria within all the populations at risk
- Prevention of malaria cases among non-immune population (residents and their dependents and employees in the rotation visitors in service)
  - Public awareness through posters, leaflets and video
  - Orientation sessions on Malaria for all new employees, analysis and recommendation of appropriate chemoprophylaxis
- Reduction of transmission of malaria in the semi-immune population
  - Mosquito nets for all employees and their dependants
  - Educational sessions on malaria carried out in homes
  - Provision of insect repellents
- Minimize the risk of potentially serious consequences of malaria through early diagnosis and effective treatment
- Malaria Hotline for employees
Program to Combat Malaria in the Chevron / CABGOC

- Overall, the rates of malaria continued to decline compared to previous years
- Awareness sessions were carried out, in which audiovisual and information leaflets were used
- 60,000 insecticide-treated curtains were acquired for windows and doors.
- Was intensified campaign to distribute treated nets in the local community
- We minimized the risk of contracting malaria, acute / fatal, through early diagnosis and treatment.
- Created a hotline for consultation on malaria for all employees.
- Medical Director SASBU became an observer member of the CCM
Success of the internal CABGOC the Prevention of Malaria
Number of cases continued to decline since 2004 - 2008

1 fatality in 2006, zero fatalities from 2007 to 2008
